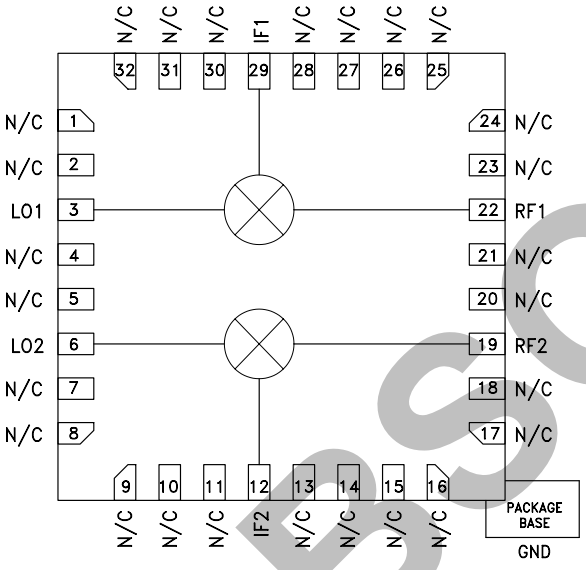
Functional Diagram



General Description

The HMC340ALP5(E) is a double balanced dual mixer covering 1.7 - 4.5 GHz RF/LO range. This passive MMIC mixer is constructed of GaAs Schottky diodes and on-chip baluns. The device can be used as an upconverter, downconverter, bi-phase (de)modulator, or phase comparator. The mixer symmetry of the HMC340ALP5(E) make it ideal for combining with external hybrids to implement a single sideband upconverter or image reject downconverter assembly. The consistent MMIC performance will improve system operation and assure regulatory compliance. A RoHS compliant, leadless 5x5 mm QFN surface mount package (LP5) houses the dual MMIC mixer IC.

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 2, 4, 5, 7-11, 13-18, 20, 21, 23-28, 30-32	N/C	No Connection. These pins may be connected to RF ground without affecting performance.	
3, 6	LO1, LO2	LO Port: This pin is DC coupled and matched to 50 Ohms.	12, 29	IF2, IF1	IF Port: This pin is DC coupled. For applications not requiring operation to DC, this port should be DC blocked externally using a series capacitor whose values has been chosen to pass the necessary IF frequency range. For operation to DC, this pin must not source/sink more than 4mA of current or die non-function and possible die failure will result.	19, 22	RF2, RF1	RF Port: This pin is DC coupled and matched to 50 Ohms.	Package Bottom	GND	Package bottom must be connect to RF/DC ground.

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
